NOTE

This is a preliminary map issued in advance of publication in order that those interested may have the benefit of the information available. The Survey would greatly appreciate any corrections of the map, as well as any additional information which will make the final map more useful.

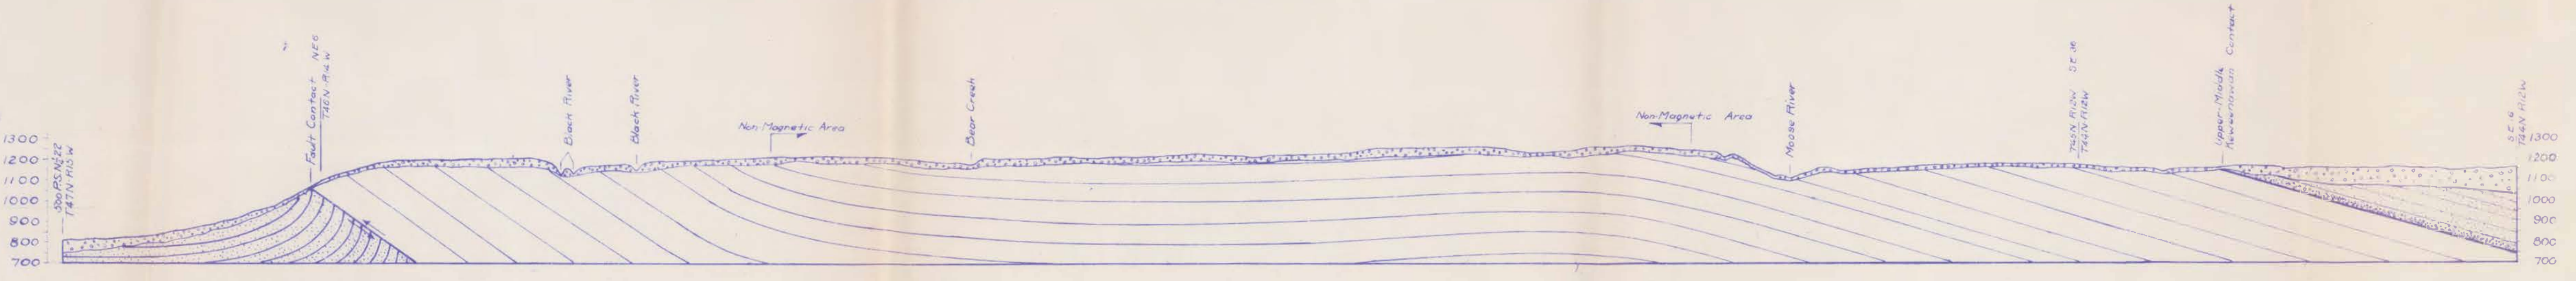

Locations
All locations are based on pacing traverses from government corners.

Magnetic Data
Complete magnetic data are not shown. At the right are given typical profiles representing actual dip needle readings along indicated traverses. On the map are drawn lines of similar magnetic attraction whose characters may be seen by reference to the profiles.
