December 7, 1983

WISCONSIN CLIMATE SUMMARY FOR 1983

This is a preliminary summary of 1983 climatological data for Wisconsin. The 11 Stations include the 4 National Weather Service stations - Madison, Milwaukee, Green Bay, and La Crosse; and 7 U.W. Experimental Farms - Arlington, Lancaster, Ashland, Spooner, Marshfield, Sturgeon Bay, and Hancock.

The tables list monthly averages of daily maximum temperature (Tmax), daily minimum temperature (Tmin), daily average temperature ($T_{avg} = (T_{max} + T_{min})/2$), precipitation (Pptn), heating degree days (HDD), and cooling degree days (CDD). The temperatures are in degrees Fahrenheit and precipitation is in inches.

Heating degree days are the monthly sums of the number of degrees below 65 degrees Fahrenheit that the daily average temperature is each day. The sums are large when the weather is cold. For example, a day with mean temperature of 35 degrees would accumulate 30 heating degree days. Heating degree days are used as an index of heating requirements, and can be correlated to winter energy consumption. Comparing the ratio of seasonal fuel use to heating degree days from year to year is a simple way for home and building owners to judge the effectiveness of insulation and other energy conservation improvements.

Cooling degree days are the monthly sums of the number of degrees above 65 degrees Fahrenheit that the daily average temperature is each day. The sums are large in hot weather. For example, a day with an average temperature of 75 degrees would accumulate 10 cooling degree days. Cooling degree days are used as an index of the need for air conditioning, and can be correlated to summer power consumption.

Two additional columns labeled "Norm" and "Dep" provide normal values for each variable, and the departure (difference) from normal each month. "Normals" are 30-year averages for the years 1951 to 1980. They provide a basis for comparison of a given month to a climatic average.

Your comments on this summary are welcome. I will be preparing a complete annual summary in January. It will include these tables and a descriptive climatic summary for 1983, with some maps and graphs to highlight the tables and text. What additional information would you like to see in this summary? Call me at 263-7679.
